QuickScan™ QS6500 and QS6500BT Obsolescence Announcement

Overview

Datalogic Scanning is announcing the obsolescence of the QuickScan QS6500 and QS6500BT linear imagers. This obsolescence is a result of the growing popularity and acceptance of 2D imaging in the marketplace.

Customers who need 1D bar code reading capability only should be migrated to the Gryphon™ 4100 series of products, which includes corded (Desk) and cordless (Bluetooth® and Mobile) models.

Customers who need the capability of reading 1D / PDF417 codes or might consider upgrading to 2D codes or image capture should be migrated to the Gryphon™ 4400 series, which also includes corded (Desk) and cordless (Bluetooth® and Mobile) models.

Migration to 2D Imaging

As area imaging technology has evolved over the past few years, more users are converting to 2D imagers because of the additional applications available. The key benefits of 2D imagers are:

- 1) No scanning orientation is needed.
- 2) Easy reading of PDF417 bar codes.
- 3) Faster and snappier scanning.
- 4) Capable of reading 1D and 2D bar codes (Data Matrix, QR Code, Aztec, etc.), as linear/PDF readers are not able to read 2D codes.
- 5) Ability to capture and transmit images.

For customers using QS6500 or QS6500BT today with special custom configuration or kit, we should be able to create similar configuration or kit in the Gryphon 4400 platform. Please work with your Datalogic Scanning account representative or Datalogic Technical Support Engineer on such request.

Please refer to our web site for additional information on the Gryphon 4400 series: www.scanning.datalogic.com.
